3M™ Scotchcal™ ElectroCut™ Film
Series 7725 and 7125

**Available in
84 colors,
including
metallics!**

3M™ Scotchcal™ ElectroCut™ Film Series 7725 and 7125 are specifically designed for high performance on electronically-controlled, friction-fed or flatbed cutters. These 2-mil, dimensionally-stable cast films provide high gloss and can be used for screen printing or thermal transfer printing.

The moisture-resistant synthetic liner on film 7725 lays flat and permits easy multi-color lay-up. The paper release liner on film 7125 helps improve the speed and quality of cutting. Our white film 7125 features a blue liner for increased visibility of cut lines. A clear, medium-tack, pressure-sensitive adhesive holds well to the liner on both films for improved weeding and allows you to:

- Apply graphics to both sides of transparent surfaces
- Utilize wet or dry application techniques

Film Series 7725 and 7125 are the ideal choice to provide customers with quality, durable, eye-catching graphics. The industry leading 3M™ MCS™ Warranty provides customers with peace of mind for graphic applications.
